

ANIKET MAHAJAN

Lead Frontend Engineer · React / Next.js / TypeScript

India - Available for Worldwide Remote · +91-7710943083 · aniketmahajanwork@gmail.com · [linkedin.com/in/aniket-mahajan-27844313a](https://www.linkedin.com/in/aniket-mahajan-27844313a)

PROFESSIONAL SUMMARY

Frontend engineer with 4+ years of experience leading cross-functional teams and delivering measurable impact at scale. As Lead Frontend Engineer at Pocket FM, I own architecture and delivery across 4 consumer products, shipping improvements that cut engineering overhead by 60%, shaved 30-50% off load times, and enabled 30% faster UI development across product pods. I drive end-to-end ownership across system design, CI/CD, performance, mentorship, and production monitoring. Built for async, remote-first environments.

EXPERIENCE

Lead Frontend Engineer · Pocket FM · Remote

Apr 2026 – Present

- ▶ Leading frontend architecture across 4 consumer products (Pocket TV, Pocket FM, AI Blaze, App Webview) on Next.js 16, driving alignment between engineering, product, and design at the platform level.
- ▶ Expanded team ownership to 6+ engineers and established engineering standards, sprint rituals, and code review practices that consistently maintain delivery velocity across product pods.
- ▶ Driving adoption of AI-augmented development workflows (Claude, MCP tooling) across the team, compressing debugging and code-gen cycles while keeping code quality consistent.
- ▶ Accountable for production health across all products, with Datadog + Lighthouse monitoring tied directly to sprint goals and measurable gains in Core Web Vitals and TTFB.

Senior Software Engineer · Pocket FM · Remote

Apr 2025 – Mar 2026

- ▶ Architected multi-product frontend platform on Next.js 16, improving Core Web Vitals scores and enabling modular architecture that cut cross-team feature duplication.
- ▶ Built Payload CMS-based internal publishing tool that eliminated 60% of inbound engineering tickets. Non-technical teams now ship content independently with zero developer involvement.
- ▶ Designed centralized design system (Radix UI + Tailwind) and a custom MCP Server for AI-assisted component discovery, reducing UI development time by 30% across 3+ product pods.
- ▶ Implemented Datadog + Lighthouse monitoring loop tying SEO metrics directly to sprint goals, producing measurable gains in page discoverability and TTFB.
- ▶ Instrumented Meta Pixel and Google Analytics 4 event tracking across consumer products, setting up custom conversion events, campaign attribution, and funnel monitoring for marketing teams.

Software Development Engineer · Pocket FM · Remote

Aug 2022 – Mar 2025

- ▶ Drove 30-50% web performance improvement through systematic asset optimization, lazy loading, and bundle analysis, measured via Lighthouse before/after each release.
- ▶ Migrated 100% of codebase from JavaScript to TypeScript, cutting reported bugs by 20% and enabling stricter code review standards across the team.
- ▶ Rebuilt authentication system using NextAuth with refresh token support and removed Firebase dependency, eliminating an entire third-party auth failure surface.
- ▶ Overhauled payment integration to latest APIs with modular architecture, achieving >90% transaction success rate with zero downtime during cutover.
- ▶ Replaced Redux with Zustand and custom API layers with React Query, cutting state-related bug reports and halving the boilerplate footprint for new features.
- ▶ Grew test coverage from near-zero to 65% overall and 95%+ for all new features (Jest, Cypress, RTL), reducing regression escapes to production.
- ▶ Established CI/CD pipeline via GitHub Actions with automated audit checks, coverage snapshots, and deployments on every PR, removing manual release steps entirely.

Frontend Engineer Intern · Pocket FM · Remote

Mar 2022 – Jul 2022

- ▶ Shipped production features and performance fixes in collaboration with PMs and designers, contributing to a pixel-perfect, responsive component library.

Software Engineer Intern · Monotype Solutions India · Noida

Oct 2021 – Jan 2022

- ▶ Built and optimized internal web tooling for non-engineering teams, focusing on performance and maintainability for daily-use workflows.

Software Engineer Intern · Khainar Technologies · Pune

Nov 2018 – Apr 2019

- ▶ Developed StudyDuniya web app across full stack, delivering end-to-end from data layer to responsive UI.

CORE SKILLS

Frontend: React, Next.js, TypeScript, Tailwind CSS, ShadCN, Radix UI, Zustand, Redux

Testing: Jest, Cypress, React Testing Library (65% codebase / 95%+ new features)

DevOps: GitHub Actions CI/CD, AWS, Cloudflare, Datadog, Lighthouse

Leadership: Team Leadership (6+ engineers), Technical Mentorship, System Design, Agile, Code Review

Practices: Performance Engineering, SEO, Design Systems, Remote Collaboration

CMS / Tools: Payload CMS, NextAuth, React Query, Shaka DRM, MCP Server Design

EDUCATION

Master of Computer Application · Savitribai Phule Pune University

2019 – 2022

Specialisation: Mobile & Application Development

Notice Period: 30-45 days
